Organic chemistry: the fundamental concepts concern the basic concepts that are very useful for a simple and clear understanding of organic chemistry. These concepts include nomenclature and classification, hybridization, electronic and physical effects, hydrogen bonding, reaction intermediates, chemical reactions, basic principles, basic principles, stereoisomerism and aromatic. This book will be extremely useful for B.Sc. General and Hons. Students of all universities and colleges. Chemistry. Organic: fundamental concepts of V.K. On the Group Results similar feedback Hardback. Condition: New. 4th magazine edition. English language. Brand new book. This book, written for students of graduate and post-graduate chemistry, provides extensive coverage of various organic reactions, rearrangements and reagents, with emphasis on their applications in organic synthesis. The oxidation chapters and reduction A summary of oxidation and reduction of organic compounds with the different reagents are provided in a tabular form for the comfort of students. The most commonly encountered reaction intermediaries are discussed in detail. The applications of organic reagents are illustrated with examples while the chapters on pre-credit reactions and photochemical reactions were included in the second and third edition, respectively, in this fourth edition a new chapter was added to the solved problems in this fourth edition, to allow students to be added to Evaluate their understanding of the topic. In the oxidation chapters and reduction a summary of oxidation and reduction of organic compounds with the different reagents is given A tabular form for the comforts of students. The most commonly encountered reaction intermediaries are discussed in detail. The applications of organic reagents are illustrated with examples while the chapters on pericyclic and photochemical reactions They were included in the second and third edition, respectively. In this fourth edition a new chapter was added to the problems solved in organic reaction mechanisms, to allow students to evaluate their understanding of the topic. In this chapter different reagents, reactions and rearrangements, which were not previous included in this book, were now included in the form of problems. New to the fourth edition: \* Large number of new reagents, reactions and rearrangements These are: Baylis-Hillman Reaction, Bucherer Reaction, Corey-Posner and Whitesides-House Synthesis, Corey-Suggors Oxidation, Dess-Martin Reagent, Reorganization of Diele-Phenol, Friedlander Synthesis, Haller-Bauer Reaction, Haller-Bauer Reaction, Heck Reaction, Hofmann-Loeffler's Freytag reaction, Pauson-Khand reaction, Mozingo reaction, nickel bores, Prins reaction, pairing of the stylys, Suzuki reaction, reaction of Tifenau-demjano, tsst-tsuji coupling. \* The problems solved on the reaction mechanism This book is also very useful for students who undertake competitive exams. Exams.
